

Tetrabutylammonium hydrogensulfate

Cat. No.:	HY-Y1045
CAS No.:	32503-27-8
Molecular Formula:	C ₁₆ H ₃₇ NO ₄ S
Molecular Weight:	339.53
Target:	Biochemical Assay Reagents
Pathway:	Others
Storage:	4°C, sealed storage, away from moisture * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)

BIOLOGICAL ACTIVITY

Description	Tetrabutylammonium hydrogensulfate is a quaternary ammonium salt that is commonly used as a phase transfer catalyst, acid catalyst and reagent in various chemical reactions, especially in organic synthesis. Tetrabutylammonium hydrogensulfate has unique chemical properties that allow it to facilitate the transfer of ions or molecules from one phase to another, making it an important ingredient in a variety of industrial processes.
In Vitro	Tetrabutylammonium hydrogensulfate is a biochemical reagent that can be used as a biological material or organic compound for life science related research. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Caution: Product has not been fully validated for medical applications. For research use only.
