

## 4β-Hydroxycholesterol-d5

<b>Cat. No.:</b>	HY-124265S1
<b>Molecular Formula:</b>	C <sub>27</sub> H <sub>41</sub> D <sub>5</sub> O <sub>2</sub>
<b>Molecular Weight:</b>	407.68
<b>Target:</b>	Endogenous Metabolite; Isotope-Labeled Compounds
<b>Pathway:</b>	Metabolic Enzyme/Protease; Others
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	4β-Hydroxycholesterol-d5 is the deuterium labeled <a href="#">4β-Hydroxycholesterol</a> (HY-124265). 4β-hydroxy Cholesterol is a major oxysterol cholesterol metabolite and a precursor in the synthesis of bile acids that is found in human circulation <sup>[1][2]</sup> .
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
