

## AZ1495

<b>Cat. No.:</b>	HY-111101		
<b>CAS No.:</b>	2196204-23-4		
<b>Molecular Formula:</b>	C <sub>21</sub> H <sub>31</sub> N <sub>5</sub> O <sub>2</sub>		
<b>Molecular Weight:</b>	385.5		
<b>Target:</b>	IRAK		
<b>Pathway:</b>	Immunology/Inflammation		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	2 years
		-20°C	1 year

### SOLVENT & SOLUBILITY

<b>In Vitro</b>	DMSO : 10 mg/mL (25.94 mM; Need ultrasonic)				
		Solvent Concentration	Mass 1 mg	5 mg	10 mg
	<b>Preparing Stock Solutions</b>	1 mM	2.5940 mL	12.9702 mL	25.9403 mL
		5 mM	0.5188 mL	2.5940 mL	5.1881 mL
10 mM		0.2594 mL	1.2970 mL	2.5940 mL	
Please refer to the solubility information to select the appropriate solvent.					
<b>In Vivo</b>	<ol style="list-style-type: none"> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 40% PEG300 &gt;&gt; 5% Tween-80 &gt;&gt; 45% saline Solubility: ≥ 1 mg/mL (2.59 mM); Clear solution</li> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 90% (20% SBE-β-CD in saline) Solubility: ≥ 1 mg/mL (2.59 mM); Clear solution</li> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 90% corn oil Solubility: ≥ 1 mg/mL (2.59 mM); Clear solution</li> </ol>				

### BIOLOGICAL ACTIVITY

<b>Description</b>	AZ1495, a weak base, is a potent orally active interleukin-1 receptor associated kinase 4 (IRAK4) inhibitor. AZ1495 has a favorable physicochemical and kinase selectivity for IRAK4 and IRAK1 with IC <sub>50</sub> values of 0.005 μM and 0.023 μM, respectively. AZ1495 has IRAK4 inhibition with a K <sub>d</sub> value of 0.0007 μM. AZ1495 can be used for the research of diffuse large B-cell lymphoma (DLBCL) <sup>[1]</sup> .			
<b>IC<sub>50</sub> &amp; Target</b>	IRAK4 5 nM (IC <sub>50</sub> )	IRAK1 23 nM (IC <sub>50</sub> )	CLK1 50 nM (IC <sub>50</sub> )	CLK2 5 nM (IC <sub>50</sub> )

	CLK4 8 nM (IC <sub>50</sub> )	haspin 4 nM (IC <sub>50</sub> )
<b>In Vitro</b>	<p>AZ1495 (compound 28) (10 μM, 1 h) has kinase selectivity for IRAK4 with IC<sub>50</sub> values of 0.005 μM (enzyme assay) and 0.052 μM (cellular assay), respectively<sup>[1]</sup>.</p> <p>AZ1495 (10 μM, 1 h) has kinase inhibition for IRAK4 with an IC<sub>50</sub> value of 0.005 μM and K<sub>d</sub> value of 0.0007 μM<sup>[1]</sup>.</p> <p>AZ1495 (0.001-100 μM, 72 h) inhibits NF-κB activation and growth of ABC-DLBCL cell lines in a dose-dependent manner<sup>[1]</sup>.</p> <p>AZ1495 (0-3.3 μM, 14 h) completely inhibits NF-κB signaling and induces cell death at lower concentration in combination with a BTK inhibitor in OCI-LY10 cells<sup>[1]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Viability Assay<sup>[1]</sup></p>	
	Cell Line:	OCI-LY10 and SUDHL2 cells
	Concentration:	0.001-100 μM
	Incubation Time:	72 h
	Result:	Inhibited growth of OCI-LY10 cells in a dose-dependent manner, whereas SUDHL2, a GCB-cell line was not sensitive and no increased cell killing to IRAK4 inhibitor. Increased the cell death in OCI-LY10 cells upon increasing concentrations of compound 28 and BTK ibrutinib.
	Western Blot Analysis <sup>[1]</sup>	
	Cell Line:	OCI-LY10 cells
	Concentration:	0-3.3 μM
	Incubation Time:	14 h
	Result:	Inhibited IκBα phosphorylation with dose-dependence in OCI-LY10 cells. Showed induction of apoptosis combination with 10 nM ibrutinib by cleavage of caspase 3 in OCI-LY10 cells.
<b>In Vivo</b>	<p>AZ1495 (compound 28) (oral, daily, 12.5 mg/kg) leads to tumor regression combination with ibrutinib in an ABC-DLBCL mouse model (OCI-LY10 cells)<sup>[1]</sup>.</p> <p>AZ1495 (iv., 2 mg/kg and oral, 5mg/kg) is characterized by high clearance (Cl) in rat (75 mL/min/kg) and moderate predictions based on hepatocyte data (Cl<sub>int</sub> 15 μL/min/106 cells, predicted clearance 42 mL/min/kg) with low bioavailability consistent with a high first pass effect<sup>[1]</sup>.</p> <p>AZ1495 (iv., 1 mg/kg) has low the amount of active renal secretion occurring in the dog<sup>[1]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>	
	Animal Model:	CB.17 SCID mice <sup>[1]</sup>
	Dosage:	12.5 mg/kg
	Administration:	oral, daily, 12.5 mg/kg
	Result:	Had modest anti-tumor activity as single agents but a combination of ibrutinib led to tumor regression and is well tolerated.
	Animal Model:	rat <sup>[1]</sup>
