

Adezmapimod hydrochloride

Cat. No.:	HY-10256A
CAS No.:	869185-85-3
Molecular Formula:	C ₂₁ H ₁₇ ClFN ₃ OS
Molecular Weight:	414
Target:	p38 MAPK; Autophagy; Mitophagy; Organoid
Pathway:	MAPK/ERK Pathway; Autophagy; Stem Cell/Wnt
Storage:	4°C, sealed storage, away from moisture * In solvent : -80°C, 1 years; -20°C, 6 months (sealed storage, away from moisture)

SOLVENT & SOLUBILITY

In Vitro	DMSO : 100 mg/mL (241.55 mM; Need ultrasonic)					
	H ₂ O : 5 mg/mL (12.08 mM; Need ultrasonic)					
	Preparing Stock Solutions	Solvent	Mass	1 mg	5 mg	10 mg
		Concentration				
		1 mM		2.4155 mL	12.0773 mL	24.1546 mL
5 mM			0.4831 mL	2.4155 mL	4.8309 mL	
	10 mM		0.2415 mL	1.2077 mL	2.4155 mL	
Please refer to the solubility information to select the appropriate solvent.						
In Vivo	1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (6.04 mM); Clear solution					
	2. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (6.04 mM); Clear solution					

BIOLOGICAL ACTIVITY

Description	Adezmapimod (SB 203580) hydrochloride is a selective and ATP-competitive p38 MAPK inhibitor with IC ₅₀ s of 50 nM and 500 nM for SAPK2a/p38 and SAPK2b/p38β2, respectively. Adezmapimod hydrochloride inhibits LCK, GSK3β and PKBα with IC ₅₀ s of 100-500-fold higher than that for SAPK2a/p38. Adezmapimod hydrochloride is an autophagy and mitophagy activator ^[1] .	
IC₅₀ & Target	p38 50 nM (IC ₅₀)	p38β2 500 nM (IC ₅₀)
In Vitro	Adezmapimod hydrochloride (preincubated with 0-30 μM for 1 h and cultured for 24 h in the presence of 20 ng/mL IL-2) prevents the IL-2-induced proliferation of primary human T cells, murine CT6 T cells, or BAF F7 B cells with an IC ₅₀ of 3-5 μM [1].	

Adezmapimod hydrochloride blocks PKB phosphorylation (IC₅₀ 3-5 μM). Adezmapimod hydrochloride inhibits the phosphorylation of Ser473 in a dose-dependent manner in both CT6 and activated human T cells and IL-2-responsive BA/F3 F7 B cells^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Cell Proliferation Assay^[1]

Cell Line:	CT6, BA/F3 cell line F7, and PBMC/T cells
Concentration:	0-30 μM
Incubation Time:	Preincubated with 0-30 μM SB203580 for 1 h and cultured for 24 h in the presence of 20 ng/mL IL-2
Result:	Prevented the IL-2-induced proliferation of primary human T cells, murine CT6 T cells, or BAF F7 B cells with an IC ₅₀ of 3-5 μM.

Western Blot Analysis^[1]

Cell Line:	CT6 cells, activated human T cells, and BA/F3 F7 cells
Concentration:	0-30 μM
Incubation Time:	Preincubated with 0-30 μM SB203580 for 1 h before stimulating with 20 ng/mL IL-2 for 5 min
Result:	Inhibited the phosphorylation of PKB at Ser473 in a dose-dependent manner.

In Vivo

Adezmapimod hydrochloride (5 mg/kg/day; intra peritoneal injected daily for 16 consecutive days, in female atymic Nu/Nu mice) treatment, p38WT tumors show a significantly smaller tumor burden when compared with p38TM tumors that were treated in parallel^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Six-week-old female atymic Nu/Nu mice CAL27 p38WT and p38TM tumors ^[1]
Dosage:	5 mg/kg/day
Administration:	Intra peritoneal injected daily for 16 consecutive days
Result:	After 2 weeks treatment, CAL27 p38WT tumors were significantly smaller; CAL27 p38TM tumors were not affected by the p38 inhibitor (n=10).
