

## Ald-Ph-amido-C2-PEG3-azide

Cat. No.:	HY-130667
CAS No.:	1807540-88-0
Molecular Formula:	C <sub>16</sub> H <sub>22</sub> N <sub>4</sub> O <sub>5</sub>
Molecular Weight:	350.37
Target:	PROTAC Linkers
Pathway:	PROTAC
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Ald-Ph-amido-C2-PEG3-azide is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs <sup>[1]</sup> . Ald-Ph-amido-C2-PEG3-azide is a click chemistry reagent, it contains an Azide group and can undergo copper-catalyzed azide-alkyne cycloaddition (CuAAC) with molecules containing Alkyne groups. Strain-promoted alkyne-azide cycloaddition (SPAAC) can also occur with molecules containing DBCO or BCN groups.
<b>IC<sub>50</sub> &amp; Target</b>	PEGs
<b>In Vitro</b>	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
