Proteins

# Inhibitors

# **Alectinib**

Cat. No.: HY-13011 CAS No.: 1256580-46-7 Molecular Formula:  $C_{30}H_{34}N_4O_2$ Molecular Weight: 482.62

Anaplastic lymphoma kinase (ALK) Target: Pathway: Protein Tyrosine Kinase/RTK

Powder -20°C 3 years 4°C 2 years

In solvent -80°C 2 years

> -20°C 1 year

Please refer to the solubility information to select the appropriate solvent.

In Vivo

- 1. Add each solvent one by one: 0.5% CMC-Na/saline water Solubility: 12.5 mg/mL (25.90 mM); Suspended solution; Need ultrasonic
- 2. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 0.38 mg/mL (0.79 mM); Clear solution
- 3. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 0.38 mg/mL (0.79 mM); Clear solution

## **BIOLOGICAL ACTIVITY**

| Description               | Alectinib (CH5424802) is a potent, selective, and orally available ALK inhibitor with an IC $_{50}$ of 1.9 nM and a K $_{d}$ value of 2.4 nM (in an ATP-competitive manner), and also inhibits ALK F1174L and ALK R1275Q with IC $_{50}$ s of 1 nM and 3.5 nM, respectively <sup>[1]</sup> . Alectinib demonstrates effective central nervous system (CNS) penetration <sup>[2]</sup> . |  |
|---------------------------|---|--|
| IC <sub>50</sub> & Target | Target IC50: 1.9 nM(ALK), 1 nM (ALK $^{F1174L}$ ), 3.5 nM (ALK $^{R1275Q}$ ) <sup>[1]</sup> Kd: 2.4 nM (ALK) <sup>[1]</sup>   |  |

#### In Vitro

Alectinib (0-1000 nM; 2 hours; NCI-H2228 cells) treatment could prevent autophosphorylation of ALK in NCI-H2228 cells expressing EML4-ALK, and it also resulted in substantial suppression of phosphorylation of STAT3 and AKT<sup>[1]</sup>. ?Alectinib (0-1000 nM; 5 days; HCC827, A549, or NCIH522 cells) treatment reduces cell activity in a dose-dependent manner [1]

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Western Blot Analysis<sup>[1]</sup>

| Cell Line:       | NCI-H2228 cells  |  |
|------------------|--|--|
| Concentration:   | 0 nM,10 nM,100 nM, 1000 nM                                 |  |
| Incubation Time: | 2 hours  |  |
| Result:          | Inhibition of ALK phosphorylation and signal transduction. |  |

#### Cell Viability Assay<sup>[1]</sup>

| Cell Line:       | HCC827, A549, or NCIH522 cells                    |  |
|------------------|---|--|
| Concentration:   | 0-1000 nM   |  |
| Incubation Time: | 5 days  |  |
| Result:          | Reduced cell activity in a dose-dependent manner. |  |

#### In Vivo

Alectinib (0.2-20 mg/kg; oral administration; once daily; for 11 days; SCID or nude mice bearing NCI-H2228 cells) treatment can result in dose-dependent tumor growth inhibition ( $EC_{50}$  of 0.46 mg/kg) and tumor regression. At any dose level, no differences in body weight or gross signs of toxicity are observed<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

| Animal Model:   | SCID or nude mice bearing NCI-H2228 cells <sup>[1]</sup>  |  |
|-----------------|---|--|
| Dosage:         | 0.2 mg/kg, 0.6 mg/kg, 2 mg/kg, 6 mg/kg, 20 mg/kg  |  |
| Administration: | Oral administration; once daily; for 11 days  |  |
| Result:         | Resulted in dose-dependent tumor growth inhibition (EC $_{\rm 50}$ of 0.46 mg/kg) and tumor regression. |  |
