

## Anthramycin

<b>Cat. No.:</b>	HY-150036
<b>CAS No.:</b>	4803-27-4
<b>Molecular Formula:</b>	C <sub>16</sub> H <sub>17</sub> N <sub>3</sub> O <sub>4</sub>
<b>Molecular Weight:</b>	315.32
<b>Target:</b>	Antibiotic; Cholecystokinin Receptor
<b>Pathway:</b>	Anti-infection; GPCR/G Protein; Neuronal Signaling
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Anthramycin, a member of the pyrolobenzodiazepine (PBD) family, is a potent antibiotic. Anthramycin has potent antitumor activity. Anthramycin can act as a potent antagonist of cholecystokinin in the central nervous system in mice <sup>[1][2][3]</sup> .																
<b>In Vitro</b>	ANT is delivered through the skin for PG (propylene glycol), TC (Transcutol P) and PGML (propylene glycol monolaurate) with the active “tracking” the skin penetration of both PG and TC <sup>[1]</sup> . Anthramycin (10-1000 μM) dose not affect the ATPase activity of heart mitochondria <sup>[3]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.																
<b>In Vivo</b>	<p>Anthramycin (0-0.5 mg/kg, IP, once) has potent anti-CCK (cholecystokinin) activity and antinociceptive effects in the central nervous system in mice<sup>[2]</sup>.</p> <p>Anthramycin (0.1-0.5 mg/kg, SC, daily for 8 days) has no effect on mitochondrial metabolism of the rat heart<sup>[3]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;">Animal Model:</td> <td>Male ddY mice (20 ± 2 g, 12-14 each group)<sup>[2]</sup></td> </tr> <tr> <td>Dosage:</td> <td>0, 0.3, and 0.5 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>IP, once, 10 min before the intracisternal (i.c.) injection of CCK</td> </tr> <tr> <td>Result:</td> <td>Significantly inhibited CCK-induced increase in the pain threshold in a dose-dependent manner. Almost completely suppressed the antinociceptive effects of CCK at the higher dose (0.5 mg/kg).</td> </tr> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;">Animal Model:</td> <td>Female CFN Gif rats (140-180 g)<sup>[3]</sup></td> </tr> <tr> <td>Dosage:</td> <td>0.1 mg/kg, 0.25 mg/kg, and 0.5 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>SC, daily for 8 days</td> </tr> <tr> <td>Result:</td> <td>Recorded no differences between anthramycin- and DMSO-treated rats with respect to P/O ratios, respiration rates, and ATPase activity of heart mitochondria.</td> </tr> </table>	Animal Model:	Male ddY mice (20 ± 2 g, 12-14 each group) <sup>[2]</sup>	Dosage:	0, 0.3, and 0.5 mg/kg	Administration:	IP, once, 10 min before the intracisternal (i.c.) injection of CCK	Result:	Significantly inhibited CCK-induced increase in the pain threshold in a dose-dependent manner. Almost completely suppressed the antinociceptive effects of CCK at the higher dose (0.5 mg/kg).	Animal Model:	Female CFN Gif rats (140-180 g) <sup>[3]</sup>	Dosage:	0.1 mg/kg, 0.25 mg/kg, and 0.5 mg/kg	Administration:	SC, daily for 8 days	Result:	Recorded no differences between anthramycin- and DMSO-treated rats with respect to P/O ratios, respiration rates, and ATPase activity of heart mitochondria.
Animal Model:	Male ddY mice (20 ± 2 g, 12-14 each group) <sup>[2]</sup>																
Dosage:	0, 0.3, and 0.5 mg/kg																
Administration:	IP, once, 10 min before the intracisternal (i.c.) injection of CCK																
Result:	Significantly inhibited CCK-induced increase in the pain threshold in a dose-dependent manner. Almost completely suppressed the antinociceptive effects of CCK at the higher dose (0.5 mg/kg).																
Animal Model:	Female CFN Gif rats (140-180 g) <sup>[3]</sup>																
Dosage:	0.1 mg/kg, 0.25 mg/kg, and 0.5 mg/kg																
Administration:	SC, daily for 8 days																
Result:	Recorded no differences between anthramycin- and DMSO-treated rats with respect to P/O ratios, respiration rates, and ATPase activity of heart mitochondria.
