BIOLOGICAL ACTIVITY

Description

Balapiravir (Ro 4588161; R1626) is an orally active proagent of a nucleoside analogue inhibitor of the RNA-dependent RNA polymerase (RdRp) of HCV (R1479; 4'-Azidocytidine). Balapiravir has anti-HCV activity^{[1][2][3]}. Balapiravir is a click chemistry reagent, it contains an Azide group and can undergo copper-catalyzed azide-alkyne cycloaddition (CuAAC) with molecules containing Alkyne groups. Strain-promoted alkyne-azide cycloaddition (SPAAC) can also occur with molecules containing DBCO or BCN groups.

In Vivo

After oral dosing of the CD-1 mice with 28.1 mg/kg of balapiravir (Ro 4588161; R1626), R1479 reaches a C_{max} and a minimum concentration in plasma (C_{min}) of 24.38 μ M and 6.34 μ M, respectively, at 2 h and 24 h postdosing^[3].
