

## CMP-5 hydrochloride

Cat. No.:	HY-113846
CAS No.:	1030021-40-9
Molecular Formula:	C <sub>21</sub> H <sub>22</sub> ClN <sub>3</sub>
Molecular Weight:	351.87
Target:	Histone Methyltransferase
Pathway:	Epigenetics
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	CMP-5 hydrochloride is a potent, specific, and selective PRMT5 inhibitor, while displays no activity against PRMT1, PRMT4, and PRMT7 enzymes. CMP-5 hydrochloride selectively blocks S2Me-H4R3 by inhibiting PRMT5 methyltransferase activity on histone preparations. CMP-5 hydrochloride prevents EBV-driven B-lymphocyte transformation but leaving normal B cells unaffected <sup>[1][2]</sup> .												
<b>IC<sub>50</sub> &amp; Target</b>	IC <sub>50</sub> : 3.7 μM (mTh1 cells), 9.2 μM (mTh2 cells) 26.9 μM (hTh1 cells), 36.1 μM (hTh2 cells) <sup>[1]</sup>												
<b>In Vitro</b>	<p>CMP-5 (0-100 μM; 24-72 hours) is selectively toxic to lymphoma cells, but shows a limited toxicity to normal resting B lymphocytes even after prolonged incubation<sup>[1]</sup>.</p> <p>CMP-5 (40 μM; 24 hours) decreases p-BTK and pY(416)SRC expression in 60A cells when it compares to the DMSO-treated group<sup>[1]</sup>.</p> <p>CMP-5 (0-40 μM; 24 hours) preferentially suppresses the proliferation of human Th1 cells over Th2 cells (43 versus 9% inhibition, respectively). The sensitivity of Th1 cells over Th2 cells to PRMT5 inhibition is different, the IC<sub>50</sub> values are 26.9 μM and 31.6 μM in human Th1 cells and Th2 cells, respectively<sup>[1]</sup>.</p> <p>CMP-5 (25 μM; 24 hours) alone inhibits mouse Th1 cell proliferation by 91%, when added different doses IL-2, IL-2 enhances proliferation and reaches a peak at 5 ng/ml<sup>[1]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Proliferation Assay<sup>[1]</sup></p> <table border="1"> <tr> <td>Cell Line:</td> <td>Human Th1 cells and Th2 cells</td> </tr> <tr> <td>Concentration:</td> <td>25 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>24 hours</td> </tr> <tr> <td>Result:</td> <td>Inhibited mouse Th1 cell proliferation, but addition of IL-2 dose-dependently increases cell proliferation.</td> </tr> </table> <p>Western Blot Analysis<sup>[1]</sup></p> <table border="1"> <tr> <td>Cell Line:</td> <td>60A cells</td> </tr> <tr> <td>Concentration:</td> <td>40 μM</td> </tr> </table>	Cell Line:	Human Th1 cells and Th2 cells	Concentration:	25 μM	Incubation Time:	24 hours	Result:	Inhibited mouse Th1 cell proliferation, but addition of IL-2 dose-dependently increases cell proliferation.	Cell Line:	60A cells	Concentration:	40 μM
Cell Line:	Human Th1 cells and Th2 cells												
Concentration:	25 μM												
Incubation Time:	24 hours												
Result:	Inhibited mouse Th1 cell proliferation, but addition of IL-2 dose-dependently increases cell proliferation.												
Cell Line:	60A cells												
Concentration:	40 μM												

---

Incubation Time:	24 hours
Result:	Inhibited p-BTK and pY(416)SRC protein level.

---
