

Ceftaroline fosamil (hydrate)(acetate)

Cat. No.:	HY-14737A
CAS No.:	400827-55-6
Molecular Formula:	C ₂₄ H ₂₇ N ₈ O ₁₁ PS ₄
Molecular Weight:	762.75
Target:	Antibiotic; Bacterial
Pathway:	Anti-infection
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Ceftaroline fosamil hydrate acetate is a potent cephalosporin antibiotic. Ceftaroline fosamil hydrate acetate shows broad-spectrum activity against Gram-positive pathogens, including methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) and multidrug-resistant <i>Streptococcus pneumoniae</i> , and common Gram-negative organisms. Ceftaroline fosamil hydrate acetate has anti-infective activity, and can be used for the research of complicated skin and skin structure infections (cSSSIs) and community-acquired bacterial pneumonia (CABP) ^{[1][2][3]} .
IC₅₀ & Target	β-lactam
In Vivo	Ceftaroline fosamil hydrate acetate (s.c.) shows protective effects against experimental systemic infection caused by <i>S. aureus</i> N133 in mice, with ED ₅₀ s of 1.60-2.37 mg/kg ^[1] . Ceftaroline fosamil hydrate acetate (10 mg/kg; s.c.) disappears rapidly and converts smoothly into T-91825 in blood of rats and monkeys ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
