

## Delmitide

<b>Cat. No.:</b>	HY-106359
<b>CAS No.:</b>	287096-87-1
<b>Molecular Formula:</b>	C <sub>59</sub> H <sub>105</sub> N <sub>17</sub> O <sub>11</sub>
<b>Molecular Weight:</b>	1228.57
<b>Sequence:</b>	d(Arg-{Nle}-{Nle}-{Nle}-Arg-{Nle}-{Nle}-{Nle}-Gly-Tyr-NH <sub>2</sub> )
<b>Sequence Shortening:</b>	d(R-{Nle}-{Nle}-{Nle}-R-{Nle}-{Nle}-{Nle}-GY-NH <sub>2</sub> )
<b>Target:</b>	TNF Receptor; IFNAR; Reactive Oxygen Species
<b>Pathway:</b>	Apoptosis; Immunology/Inflammation; Metabolic Enzyme/Protease; NF-κB
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Delmitide (RDP58) is an orally active d-isomer decapeptide with potent anti-inflammatory activity. Delmitide inhibits production of TNF-α, IFN-γ, and interleukin (IL)-12, and up-regulates heme oxygenase 1 activity. Delmitide can be used for the research of ulcerative colitis <sup>[1][2]</sup> .								
<b>In Vivo</b>	<p>Delmitide (oral; 2.5, 5, 10 mg/kg; daily) significantly reduced CPT-11-induced diarrhea, mucosal inflammation, and mortality in mice by suppressing the overproduction of proinflammatory cytokines TNF-α, IFN-γ, and IL-12 in vivo<sup>[2]</sup>.</p> <p>Delmitide (oral; 2.5, 5, 10 mg/kg; daily) generates an enhanced tumor response and prolongation of time to relapse without concomitant GI toxicity in mice<sup>[2]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td><b>Animal Model:</b></td> <td>BALB/c mice (female, 9-10-week)<sup>[2]</sup></td> </tr> <tr> <td><b>Dosage:</b></td> <td>2.5, 5, 10 mg/kg or 0.2 mL, 10 mg/kg</td> </tr> <tr> <td><b>Administration:</b></td> <td>Oral, daily</td> </tr> <tr> <td><b>Result:</b></td> <td> <p>Reduced the incidence of diarrhea and attenuated CPT-11-associated GI toxicity and mortality in a dose-dependent manner.</p> <p>Had protective effect against chemotherapy-induced GI side-effects and reduced CPT-11-induced overexpression of TNF-α, IFN-γ, and IL-12 in vivo.</p> <p>Preserved the intestinal mucosa morphology by maintaining villus and crypt structure and inhibited TNF-α-mediated apoptosis in the crypt compartment, thereby protecting intestinal mucosa integrity in mice.</p> <p>Protected mice from CPT-11-induced GI toxicity and mortality and enhanced animal survival in tumor-bearing mice.</p> <p>Significantly reduced the incidence and overall tumor burden in a spontaneously metastatic model.</p> </td> </tr> </table>	<b>Animal Model:</b>	BALB/c mice (female, 9-10-week) <sup>[2]</sup>	<b>Dosage:</b>	2.5, 5, 10 mg/kg or 0.2 mL, 10 mg/kg	<b>Administration:</b>	Oral, daily	<b>Result:</b>	<p>Reduced the incidence of diarrhea and attenuated CPT-11-associated GI toxicity and mortality in a dose-dependent manner.</p> <p>Had protective effect against chemotherapy-induced GI side-effects and reduced CPT-11-induced overexpression of TNF-α, IFN-γ, and IL-12 in vivo.</p> <p>Preserved the intestinal mucosa morphology by maintaining villus and crypt structure and inhibited TNF-α-mediated apoptosis in the crypt compartment, thereby protecting intestinal mucosa integrity in mice.</p> <p>Protected mice from CPT-11-induced GI toxicity and mortality and enhanced animal survival in tumor-bearing mice.</p> <p>Significantly reduced the incidence and overall tumor burden in a spontaneously metastatic model.</p>
