

Gatifloxacin mesylate

Cat. No.:	HY-10581B
CAS No.:	316819-28-0
Molecular Formula:	C ₂₀ H ₂₆ FN ₃ O ₇ S
Molecular Weight:	471.5
Target:	Bacterial; Topoisomerase; Antibiotic
Pathway:	Anti-infection; Cell Cycle/DNA Damage
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Gatifloxacin mesylate (AM-1155; BMS-206584; PD135432) is a potent fluoroquinolone antibiotic with broad-spectrum antibacterial activity. Gatifloxacin mesylate inhibits bacterial type II topoisomerases (IC ₅₀ =13.8 µg/ml for <i>S. aureus</i> topoisomerase IV) and <i>E. coli</i> DNA gyrase (IC ₅₀ = 0.109 µg/ml) ^[1] . Gatifloxacin mesylate can be used to treat bacterial conjunctivitis in vivo.									
IC₅₀ & Target	Quinolone	Topoisomerase II 36.7 µM (IC ₅₀)								
In Vitro	<p>Gatifloxacin mesylate is against <i>S. aureus</i> MS5935 topoisomerase IV, <i>E. coli</i> NIHJ JC-2 DNA gyrase and HeLa cell topoisomerase II with IC₅₀ values of 13.8 µg/ml, 0.109 µg/ml, and 265 µg/ml, respectively^[1].</p> <p>Gatifloxacin mesylate is against <i>S. aureus</i> MS5935 topoisomerase IV, <i>E. coli</i> NIHJ JC-2 DNA gyrase and HeLa cell topoisomerase II with MIC values of 0.05 µg/ml, 0.0063 µg/ml, and 122 µg/ml, respectively^[1].</p> <p>Gatifloxacin mesylate exhibits antibacterial activities for wild-type strains (MS5935, MS5952, MR5867 and MR6009) the first-, second-, third-, and fourth-step mutants with MIC values of 0.05 to 0.10 µg/ml, 0.20 µg/ml, 1.56 to 3.13 µg/ml, 1.56 to 6.25 µg/ml, and 50 to 200 µg/ml, respectively. Gatifloxacin mesylate displays the most potent activity against the second- and third-step mutants (MS5952, MR5867 and MR6009) except for the second-step mutant of strain MS5935^[2].</p> <p>Gatifloxacin mesylate has potent activity against <i>norA</i> transformant NY12 (MIC, 0.39 µg/ml)^[2].</p> <p>Gatifloxacin mesylate (20-100 µM; 72 hours) significantly decreases insulin content to 60% at Day 1, and continues to be reduced to 50.1% and 44.7% at Day 3 by 20 µM and 100 µM Gatifloxacin mesylate, respectively^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>									
In Vivo	<p>Gatifloxacin mesylate (subcutaneous injection; 100 mg/kg; 3 times a day; 30 days) significantly decreases the number of lesions in mouse footpad with <i>Nocardia brasiliensis</i>^[4].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;">Animal Model:</td> <td>Female BALB/c mice with <i>Nocardia brasiliensis</i> in the right hind footpad.</td> </tr> <tr> <td>Dosage:</td> <td>100 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Subcutaneous injection; 3 times a day; 30 days</td> </tr> <tr> <td>Result:</td> <td>Reduced the production of lesions in mice.</td> </tr> </table>		Animal Model:	Female BALB/c mice with <i>Nocardia brasiliensis</i> in the right hind footpad.	Dosage:	100 mg/kg	Administration:	Subcutaneous injection; 3 times a day; 30 days	Result:	Reduced the production of lesions in mice.
Animal Model:	Female BALB/c mice with <i>Nocardia brasiliensis</i> in the right hind footpad.									
Dosage:	100 mg/kg									
Administration:	Subcutaneous injection; 3 times a day; 30 days									
Result:	Reduced the production of lesions in mice.
