BIOLOGICAL ACTIVITY

Description	Glutarimide-Isoindolinone-NH-PEG4-COOH is a synthesized E3 ligase ligand-linker conjugate that incorporates a cereblon ligand and a linker used in PROTAC technology ^[1] .
IC ₅₀ & Target	Cereblon
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
