BIOLOGICAL ACTIVITY

Description	Guanosine 5'-diphosphate (GDP) disodium salt is a nucleoside diphosphate that activates adenosine 5'-triphosphate-sensitive K ⁺ channel. Guanosine 5'-diphosphate disodium salt is a potential iron mobilizer, which prevents the hepcidin-ferroportin interaction and modulates the interleukin-6 (IL-6)/stat-3 pathway. Guanosine 5'-diphosphate disodium salt can be used in the research of inflammation, such as anemia of inflammation (AI) ^{[1][2]} .
