

## LFHP-1c

<b>Cat. No.:</b>	HY-139598		
<b>CAS No.:</b>	2102347-47-5		
<b>Molecular Formula:</b>	C <sub>55</sub> H <sub>64</sub> N <sub>6</sub> O <sub>4</sub>		
<b>Molecular Weight:</b>	873.13		
<b>Target:</b>	Phospholipase		
<b>Pathway:</b>	Metabolic Enzyme/Protease		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

<b>In Vitro</b>	DMSO : 100 mg/mL (114.53 mM; Need ultrasonic)					
		Solvent Concentration	Mass	1 mg	5 mg	10 mg
	<b>Preparing Stock Solutions</b>	1 mM		1.1453 mL	5.7265 mL	11.4530 mL
		5 mM		0.2291 mL	1.1453 mL	2.2906 mL
10 mM			0.1145 mL	0.5727 mL	1.1453 mL	
Please refer to the solubility information to select the appropriate solvent.						
<b>In Vivo</b>	<ol style="list-style-type: none"> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 20% HS-15 &gt;&gt; 70% saline Solubility: 2.5 mg/mL (2.86 mM); Suspended solution; Need ultrasonic</li> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 40% PEG300 &gt;&gt; 5% Tween-80 &gt;&gt; 45% saline Solubility: ≥ 2.5 mg/mL (2.86 mM); Clear solution</li> </ol>					

### BIOLOGICAL ACTIVITY

<b>Description</b>	LFHP-1c is an PGAM5 inhibitor with neuroprotective activity in brain ischemic stroke. LFHP-1c protects blood-brain barrier integrity from ischemia-induced injury. LFHP-1c binds to endothelial PGAM5 to inhibit the activity of PGAM5 phosphatase and the interaction of PGAM5 with NRF2. LFHP-1c exhibits in vitro and in vivo protection <sup>[1]</sup> .
<b>In Vitro</b>	LFHP-1c (1, 2, or 5 μmol/L; 9 h) treatment, and followed by hypoxic treatment, increases NRF2 protein expression and facilitates nuclear translocation of NRF2 in primary rat brain microvascular endothelial cells (rBMECs) <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only. Immunofluorescence <sup>[1]</sup>

	<table border="1"> <tr> <td>Cell Line:</td> <td>Primary rat brain microvascular endothelial cells (rBMECs)</td> </tr> <tr> <td>Concentration:</td> <td>2 <math>\mu</math>mol/L</td> </tr> <tr> <td>Incubation Time:</td> <td>1 h</td> </tr> <tr> <td>Result:</td> <td>Bound to PGAM5, to facilitate nuclear translocation of NRF2.</td> </tr> </table>	Cell Line:	Primary rat brain microvascular endothelial cells (rBMECs)	Concentration:	2 $\mu$ mol/L	Incubation Time:	1 h	Result:	Bound to PGAM5, to facilitate nuclear translocation of NRF2.								
Cell Line:	Primary rat brain microvascular endothelial cells (rBMECs)																
Concentration:	2 $\mu$ mol/L																
Incubation Time:	1 h																
Result:	Bound to PGAM5, to facilitate nuclear translocation of NRF2.																
<b>In Vivo</b>	<p>LFHP-1c (5 mg/kg; iv; 2 doses) prevents BBB disruption after transient middle cerebral artery occlusion (tMCAO) in rats<sup>[1]</sup>.  LFHP-1c (3 mg/kg, 1 mL/kg; iv; 8 doses) ameliorates brain ischemic injury in tMCAO model of <i>M. fascicularis</i> through PGAM5-NRF2 axis<sup>[1]</sup>.  MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>Nonhuman primate <i>Macaca fascicularis</i> model with tMCAO<sup>[1]</sup></td> </tr> <tr> <td>Dosage:</td> <td>3 mg/kg, 1 mL/kg</td> </tr> <tr> <td>Administration:</td> <td>IV; at 4 h, 1, 2, 3, 4, 5, 6 and 7 days after tMCAO onset.</td> </tr> <tr> <td>Result:</td> <td>Reduced infarct volume, brain edema and neurological deficits in Transient MCAO model in <i>M. fascicularis</i>.</td> </tr> </table> <table border="1"> <tr> <td>Animal Model:</td> <td>SD rats (230-250 g)<sup>[1]</sup></td> </tr> <tr> <td>Dosage:</td> <td>1 mg/kg, 5 mg/kg in 0.5 mL volume</td> </tr> <tr> <td>Administration:</td> <td>IV; injected at 4 or 12 h after ischemia onset, and then injected another time at 24 h post-ischemia</td> </tr> <tr> <td>Result:</td> <td>Dose-dependently protected rat brains against ischemia/reperfusion injury at 72 h after ischemia onset with a moderate therapeutic window. Prevented BBB disruption and attenuated endothelial inflammation in rat cerebral microvessels at 72 h after ischemia onset.</td> </tr> </table>	Animal Model:	Nonhuman primate <i>Macaca fascicularis</i> model with tMCAO <sup>[1]</sup>	Dosage:	3 mg/kg, 1 mL/kg	Administration:	IV; at 4 h, 1, 2, 3, 4, 5, 6 and 7 days after tMCAO onset.	Result:	Reduced infarct volume, brain edema and neurological deficits in Transient MCAO model in <i>M. fascicularis</i> .	Animal Model:	SD rats (230-250 g) <sup>[1]</sup>	Dosage:	1 mg/kg, 5 mg/kg in 0.5 mL volume	Administration:	IV; injected at 4 or 12 h after ischemia onset, and then injected another time at 24 h post-ischemia	Result:	Dose-dependently protected rat brains against ischemia/reperfusion injury at 72 h after ischemia onset with a moderate therapeutic window. Prevented BBB disruption and attenuated endothelial inflammation in rat cerebral microvessels at 72 h after ischemia onset.
Animal Model:	Nonhuman primate <i>Macaca fascicularis</i> model with tMCAO <sup>[1]</sup>																
Dosage:	3 mg/kg, 1 mL/kg																
Administration:	IV; at 4 h, 1, 2, 3, 4, 5, 6 and 7 days after tMCAO onset.																
Result:	Reduced infarct volume, brain edema and neurological deficits in Transient MCAO model in <i>M. fascicularis</i> .																
Animal Model:	SD rats (230-250 g) <sup>[1]</sup>																
Dosage:	1 mg/kg, 5 mg/kg in 0.5 mL volume																
Administration:	IV; injected at 4 or 12 h after ischemia onset, and then injected another time at 24 h post-ischemia																
Result:	Dose-dependently protected rat brains against ischemia/reperfusion injury at 72 h after ischemia onset with a moderate therapeutic window. Prevented BBB disruption and attenuated endothelial inflammation in rat cerebral microvessels at 72 h after ischemia onset.
