

Lignoceric acid-d₃

Cat. No.:	HY-121883S1
CAS No.:	851073-55-7
Molecular Formula:	C ₂₄ H ₄₅ D ₃ O ₂
Molecular Weight:	371.66
Target:	Endogenous Metabolite
Pathway:	Metabolic Enzyme/Protease
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Lignoceric acid-d ₃ is the deuterium labeled Lignoceric acid[1]. Lignoceric acid (Tetracosanoic acid) is a 24-carbon saturated (24:0) fatty acid, which is synthesized in the developing brain. Lignoceric acid is also a by-product of lignin production. Lignoceric acid can be used for Zellweger cerebrohepato renal syndrome and adrenoleukodystrophy research[2][3].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
