

N-Hydroxypropyl-N'-(azide-PEG3)-Cy3

Cat. No.:	HY-141029
Molecular Formula:	C ₃₄ H ₄₆ ClN ₅ O ₄
Molecular Weight:	624.21
Target:	PROTAC Linkers
Pathway:	PROTAC
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	N-Hydroxypropyl-N'-(azide-PEG3)-Cy3 is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] . N-Hydroxypropyl-N'-(azide-PEG3)-Cy3 is a click chemistry reagent, it contains an Azide group and can undergo copper-catalyzed azide-alkyne cycloaddition reaction (CuAAC) with molecules containing Alkyne groups. Strain-promoted alkyne-azide cycloaddition (SPAAC) can also occur with molecules containing DBCO or BCN groups.
IC₅₀ & Target	PEGs
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
