BIOLOGICAL ACTIVITY

Description	NHS-bis-PEG2-amide-Mal is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] .
IC₅₀ & Target	PEGs
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
