

## PF429242 dihydrochloride

<b>Cat. No.:</b>	HY-13447A
<b>CAS No.:</b>	2248666-66-0
<b>Molecular Formula:</b>	C <sub>25</sub> H <sub>37</sub> Cl <sub>2</sub> N <sub>3</sub> O <sub>2</sub>
<b>Molecular Weight:</b>	482.49
<b>Target:</b>	Virus Protease; Fatty Acid Synthase (FASN)
<b>Pathway:</b>	Anti-infection; Metabolic Enzyme/Protease
<b>Storage:</b>	4°C, sealed storage, away from moisture * In solvent : -80°C, 2 years; -20°C, 1 year (sealed storage, away from moisture)

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : ≥ 83.3 mg/mL (172.65 mM)  
 H<sub>2</sub>O : 50 mg/mL (103.63 mM; Need ultrasonic)  
 \* "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	2.0726 mL	10.3629 mL	20.7258 mL
	5 mM	0.4145 mL	2.0726 mL	4.1452 mL
	10 mM	0.2073 mL	1.0363 mL	2.0726 mL

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: PBS  
Solubility: 100 mg/mL (207.26 mM); Clear solution; Need ultrasonic
- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
Solubility: ≥ 2.5 mg/mL (5.18 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)  
Solubility: ≥ 2.5 mg/mL (5.18 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil  
Solubility: ≥ 2.5 mg/mL (5.18 mM); Clear solution

### BIOLOGICAL ACTIVITY

#### Description

PF429242 dihydrochloride is a reversible and competitive SREBP site 1 protease (S1P) inhibitor with an IC<sub>50</sub> of 175 nM<sup>[1]</sup>.

#### IC<sub>50</sub> & Target

IC<sub>50</sub>: 175 nM (S1P)<sup>[1]</sup>

#### In Vitro

10 μM PF-429242 inhibits endogenous SREBP processing in Chinese hamster ovary cells. PF-429242 also down-regulates the

signal from an SRE-luciferase reporter gene in human embryonic kidney 293 cells and the expression of endogenous SREBP target genes in cultured HepG2 cells. In HepG2 cells, PF-429242 inhibits cholesterol synthesis, with an  $IC_{50}$  of  $0.5 \mu\text{M}$ <sup>[1]</sup>. The addition of PF-429242 ( $30 \mu\text{M}$ ) shows statistically significant suppression of infectious viral titers and viral RNA copies in the cell culture fluids. PF-429242 treatment also shows suppressive effects on DENV2 yields in the cultured fluids of human-derived HEK-293, Hep G2, and non-human-primate derived LLC-MK2 cells<sup>[2]</sup>. PF-429242 efficiently prevents the processing of GPC from the prototypic arenavirus lymphocytic choriomeningitis virus (LCMV) and LASV, which correlates with the compound's potent antiviral activity against LCMV and LASV in cultured cells<sup>[3]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

#### In Vivo

In mice treated with PF-429242 for 24 h, the expression of hepatic SREBP target genes is suppressed, and the hepatic rates of cholesterol and fatty acid synthesis are reduced<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

## PROTOCOL

#### Animal Administration<sup>[1]</sup>

Mice: To test the in vivo efficacy of PF-429242 in regulating SREBP target genes, male CD1 mice are dosed i.p. with 10 or 30 mg/kg PF-429242 or saline once every 6 over a 24-h period. Mice are euthanized 6 h after the final dose, and liver tissue is collected, frozen rapidly in liquid nitrogen, and stored at  $-80^{\circ}\text{C}$ . For RNA isolation, 50 to 100 mg of frozen liver tissue from each sample is homogenized in 1 ml of TRIzol reagent. Total RNA is extracted following the manufacturer's instructions, and the resulting total RNA from each sample underwent DNA-free treatment<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
