

## Psychosine-d<sub>7</sub>

Cat. No.:	HY-136490S1
CAS No.:	2315262-31-6
Molecular Formula:	C <sub>24</sub> H <sub>40</sub> D <sub>7</sub> NO <sub>7</sub>
Molecular Weight:	468.68
Target:	PKC
Pathway:	Epigenetics; TGF-beta/Smad
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Psychosine-d <sub>7</sub> is deuterium labeled Psychosine. Psychosine, a substrate of the galactocerebrosidase (GALC) enzyme, is a potential biomarker for Krabbe disease. Psychosine is a highly cytotoxic lipid, capable of inducing cell death in a wide variety of cell
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[3]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
