

## Rucaparib

<b>Cat. No.:</b>	HY-10617A		
<b>CAS No.:</b>	283173-50-2		
<b>Molecular Formula:</b>	C <sub>19</sub> H <sub>18</sub> FN <sub>3</sub> O		
<b>Molecular Weight:</b>	323		
<b>Target:</b>	PARP		
<b>Pathway:</b>	Cell Cycle/DNA Damage; Epigenetics		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : 25 mg/mL (77.40 mM; ultrasonic and adjust pH to 4 with HCl)  
 H<sub>2</sub>O : < 0.1 mg/mL (ultrasonic;warming;heat to 60°C) (insoluble)

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	3.0960 mL	15.4799 mL	30.9598 mL
	5 mM	0.6192 mL	3.0960 mL	6.1920 mL
	10 mM	0.3096 mL	1.5480 mL	3.0960 mL

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
 Solubility: ≥ 2.5 mg/mL (7.74 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)  
 Solubility: ≥ 2.5 mg/mL (7.74 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil  
 Solubility: ≥ 2.5 mg/mL (7.74 mM); Clear solution

### BIOLOGICAL ACTIVITY

#### Description

Rucaparib (AG014699) is an orally active, potent inhibitor of PARP proteins (PARP-1, PARP-2 and PARP-3) with a K<sub>i</sub> of 1.4 nM for PARP1. Rucaparib is a modest hexose-6-phosphate dehydrogenase (H6PD) inhibitor. Rucaparib has the potential for castration-resistant prostate cancer (CRPC) research<sup>[1][2][3][4]</sup>.

#### IC<sub>50</sub> & Target

PARP-1	PARP-2	PARP-3
1.4 nM (K <sub>i</sub> )		

<p><b>In Vitro</b></p>	<p>Rucaparib (AG014699) is a possible N-demethylation metabolite of AG14644<sup>[1]</sup>. Rucaparib (0.1, 1, 10, 100 <math>\mu</math>M; 24 hours) is cytotoxic and has the LC<sub>50</sub> being 5 <math>\mu</math>M in Capan-1 (BRCA2 mutant) cells and only 100 nM in MX-1 (BRCA1 mutant) cells<sup>[2]</sup>. The radio-sensitization by Rucaparib is due to downstream inhibition of activation of NF-<math>\kappa</math>B, and is independent of SSB repair inhibition. Rucaparib can target NF-<math>\kappa</math>B activated by DNA damage and overcome toxicity observed with classical NF-<math>\kappa</math>B inhibitors without compromising other vital inflammatory functions<sup>[5]</sup>. Rucaparib inhibits PARP-1 activity by 97.1% at a concentration of 1 <math>\mu</math>M in permeabilised D283Med cells<sup>[6]</sup>. MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>								
<p><b>In Vivo</b></p>	<p>Rucaparib (AG014699) and AG14584 significantly increase Temozolomide toxicity. Rucaparib (1 mg/kg) significantly increases Temozolomide-induced body weight loss. Rucaparib (0.1 mg/kg) results in a 50% increase in the temozolomide-induced tumor growth delay<sup>[1]</sup>. Rucaparib (10 mg/kg for i.p. or 50, 150 mg/kg for p.o.; daily for 5 days per week for 6 weeks) significantly inhibits the growth of the tumor, and there is one complete tumor regression and two persistent partial regressions<sup>[2]</sup>. Rucaparib (150 mg/kg; p.o.; once per week for 6 weeks or three times per week for 6 weeks) has greatest antitumor effect with three complete regressions<sup>[2]</sup>. Rucaparib enhances the antitumor activity of temozolomide and indicates complete and sustained tumor regression in NB1691 and SHSY5Y xenografts<sup>[6]</sup>. MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1" data-bbox="347 800 1515 1035"> <tr> <td>Animal Model:</td> <td>Female CD-1 nude mice aged 10-12 weeks with Capan-1 cells<sup>[2]</sup></td> </tr> <tr> <td>Dosage:</td> <td>10 mg/kg for i.p. or 50, 150 mg/kg for p.o.</td> </tr> <tr> <td>Administration:</td> <td>IP or PO</td> </tr> <tr> <td>Result:</td> <td>Significantly inhibited the growth of the tumor.</td> </tr> </table>	Animal Model:	Female CD-1 nude mice aged 10-12 weeks with Capan-1 cells <sup>[2]</sup>	Dosage:	10 mg/kg for i.p. or 50, 150 mg/kg for p.o.	Administration:	IP or PO	Result:	Significantly inhibited the growth of the tumor.
Animal Model:	Female CD-1 nude mice aged 10-12 weeks with Capan-1 cells <sup>[2]</sup>								
Dosage:	10 mg/kg for i.p. or 50, 150 mg/kg for p.o.								
Administration:	IP or PO								
Result:	Significantly inhibited the growth of the tumor.
