

## SU14813

<b>Cat. No.:</b>	HY-10501		
<b>CAS No.:</b>	627908-92-3		
<b>Molecular Formula:</b>	C <sub>23</sub> H <sub>27</sub> FN <sub>4</sub> O <sub>4</sub>		
<b>Molecular Weight:</b>	442.48		
<b>Target:</b>	PDGFR; VEGFR; c-Kit		
<b>Pathway:</b>	Protein Tyrosine Kinase/RTK		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	2 years
		-20°C	1 year

### SOLVENT & SOLUBILITY

<b>In Vitro</b>	DMSO : 44 mg/mL (99.44 mM; Need ultrasonic)				
		Solvent Concentration	Mass 1 mg	5 mg	10 mg
	<b>Preparing Stock Solutions</b>	1 mM	2.2600 mL	11.2999 mL	22.5999 mL
		5 mM	0.4520 mL	2.2600 mL	4.5200 mL
10 mM		0.2260 mL	1.1300 mL	2.2600 mL	
Please refer to the solubility information to select the appropriate solvent.					
<b>In Vivo</b>	1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (5.65 mM); Clear solution  2. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.5 mg/mL (5.65 mM); Clear solution				

### BIOLOGICAL ACTIVITY

<b>Description</b>	SU14813 is a multi-targeted receptor tyrosine kinases inhibitor with IC <sub>50</sub> s of 50, 2, 4, 15 nM for VEGFR2, VEGFR1, PDGFRβ and KIT.			
<b>IC<sub>50</sub> &amp; Target</b>	VEGFR1 2 nM (IC <sub>50</sub> )	VEGFR2 50 nM (IC <sub>50</sub> )	PDGFRβ 4 nM (IC <sub>50</sub> )	KIT 15 nM (IC <sub>50</sub> )
<b>In Vitro</b>	SU14813 inhibits ligand-dependent and ligand-independent proliferation, migration, and survival of endothelial cells and/or tumor cells expressing these targets. SU14813 inhibits cellular ligand-dependent phosphorylation of VEGFR-2 (transfected NIH 3T3 cells), PDGFR-β (transfected NIH 3T3 cells), KIT (Mo7e cells), and FLT3-internal tandem duplication (FLT3-ITD; MV4;11 cells) as well as FMS/CSF1R (transfected NIH 3T3 cells). SU14813 inhibits VEGFR-2, PDGFR-β, and KIT			

phosphorylation in porcine aorta endothelial cells overexpressing these targets, with cellular IC<sub>50</sub> values of 5.2, 9.9, and 11.2 nM, respectively. SU14813 inhibits the growth of U-118MG with an IC<sub>50</sub> of 50 to 100 nM<sup>[1]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

#### In Vivo

SU14813 inhibits VEGFR-2, PDGFR- $\beta$ , and FLT3 phosphorylation in xenograft tumors in a dose- and time-dependent fashion. The plasma concentration required for in vivo target inhibition is estimated to be 100 to 200 ng/mL. Used as monotherapy, SU14813 exhibits broad and potent antitumor activity resulting in regression, growth arrest, or substantially reduces growth of various established xenografts derived from human or rat tumor cell lines. Treatment in combination with docetaxel significantly enhances both the inhibition of primary tumor growth and the survival of the tumor-bearing mice compared with administration of either agent alone<sup>[1]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

## PROTOCOL

#### Cell Assay <sup>[1]</sup>

The effect of SU14813 on endothelial cell survival is evaluated. Passages 4 to 5 human umbilical vein endothelial cells are grown to subconfluency in EGM2 medium containing 10% FBS, endothelial cell growth supplement, and 10  $\mu$ g/mL sodium heparin. The cells are seeded in 96-well plates at 10,000 per well in F12K medium and 10% FBS. The next day, cells are starved for 18 hours in F12K+1% FBS and then incubated with SU14813 in various concentrations. 45 minutes later, 20 ng/mL growth factor [VEGF or basic fibroblast growth factor (bFGF)] is introduced into the assay. Three days later, cell numbers are determined using the 3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide assay<sup>[1]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

#### Animal Administration <sup>[1]</sup>

Mouse: SU14813 is evaluated for its efficacy and synergism in combination with the microtubule inhibitor docetaxel in docetaxel-resistant murine LLC model. SU14813 is administered p.o. twice daily (BID) at doses of 10, 40, 80, or 120 mg/kg beginning on day 5 after tumor implantation. Docetaxel 40 mg/kg (mouse maximum tolerated dose) is administered i.v. thrice weekly also beginning on day 5 after tumor implantation<sup>[1]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.
