BIOLOGICAL ACTIVITY

Description	Temocillin disodium, a 6- α -methoxy penicillin, possesses antibacterial activity ^[1] .
In Vivo	Temocillin dosing regimens of 200 mg/kg every 4 and 6 h remained significantly effective in reducing bacterial titres in kidneys against the two strains, with no significant difference between the parental strain and its transconjugant ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
