

Thalidomide-4-C3-NH2 hydrochloride

Cat. No.:	HY-139545
CAS No.:	2357110-84-8
Molecular Formula:	C ₁₆ H ₁₈ ClN ₃ O ₄
Molecular Weight:	351.78
Target:	Ligands for E3 Ligase
Pathway:	PROTAC
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Thalidomide-4-C3-NH2 hydrochloride is the Thalidomide-based cereblon ligand used in the recruitment of CRBN protein. Thalidomide-4-C3-NH2 hydrochloride can be connected to the ligand for protein by a linker to form PROTACs ^[1] .
IC ₅₀ & Target	Cereblon
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
