

## Thalidomide-NH-amido-C2-NH2 hydrochloride

<b>Cat. No.:</b>	HY-138849A
<b>Molecular Formula:</b>	C <sub>17</sub> H <sub>20</sub> ClN <sub>5</sub> O <sub>5</sub>
<b>Molecular Weight:</b>	409.82
<b>Target:</b>	E3 Ligase Ligand-Linker Conjugates
<b>Pathway:</b>	PROTAC
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Thalidomide-NH-amido-C2-NH2 hydrochloride is a synthesized E3 ligase ligand-linker conjugate that incorporates the Thalidomide based cereblon ligand and a linker used in PROTAC technology <sup>[1]</sup> .
<b>IC<sub>50</sub> &amp; Target</b>	Cereblon
<b>In Vitro</b>	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins <sup>[2]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
