

## Thalidomide-NH-amido-PEG1-C2-NH2

Cat. No.:	HY-138854
Molecular Formula:	C <sub>19</sub> H <sub>23</sub> N <sub>5</sub> O <sub>6</sub>
Molecular Weight:	417.42
Target:	E3 Ligase Ligand-Linker Conjugates
Pathway:	PROTAC
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

Description	Thalidomide-NH-amido-PEG1-C2-NH <sub>2</sub> is a synthesized E3 ligase ligand-linker conjugate that incorporates the Thalidomide based cereblon ligand and a linker used in PROTAC technology <sup>[1]</sup> .
IC <sub>50</sub> & Target	Cereblon
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins <sup>[2]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
