BIOLOGICAL ACTIVITY

Description	Tos-PEG6-CH2-Boc is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] .		
IC ₅₀ & Target	PEGs	Alkyl/ether	
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
