BIOLOGICAL ACTIVITY

Description

Umbellulone is an active constituent of the leaves of *Umbellularia californica*. Umbellulone stimulates the TRPA1 channel in a subset of peptidergic, nociceptive neurons, activating the trigeminovascular system via this mechanism^[1].

IC₅₀ & Target

TRPA1 channel^[1]

In Vitro

Umbellulone, from μM to sub-mM concentrations, selectively stimulates transient receptor potential ankyrin 1-expressing HEK293 cells^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

In Vivo

Umbellulone (50–250 nM/5ul) causes an acute nociceptive response in a dose-dependent manner in *Trpa1*^{+/+} mice^[1].

Umbellulone (150 μg/kg; intravenous or intranasal) do not affect systemic blood pressure^[1].

Umbellulone (30-150 μg/kg; i.v.) increases meningeal blood flow in a dose-dependent manner^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:

Sprague-Dawley rats (male, 250 g)^[1]

Dosage:	30 µg/kg, 75 µg/kg, 150 µg/kg
Administration:	Intravenously
Result:	Increased meningeal blood flow in a dose-dependent manner.
