BIOLOGICAL ACTIVITY

| | | |
|-------------------------------------|--|-------------|
| Description | t-Boc-Aminoxy-PEG12-Boc is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] . | |
| IC₅₀ & Target | PEGs | Alkyl/ether |
| In Vitro | PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only. | |
