

t-Boc-Aminoxy-PEG5-azide

| | |
|--------------------|---|
| Cat. No.: | HY-140434 |
| CAS No.: | 2250216-95-4 |
| Molecular Formula: | C ₁₇ H ₃₄ N ₄ O ₈ |
| Molecular Weight: | 422.47 |
| Target: | PROTAC Linkers |
| Pathway: | PROTAC |
| Storage: | Please store the product under the recommended conditions in the Certificate of Analysis. |

BIOLOGICAL ACTIVITY

| | | |
|-------------------------------------|---|-------------|
| Description | t-Boc-Aminoxy-PEG5-azide is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] . t-Boc-Aminoxy-PEG5-azide is a click chemistry reagent, it contains an Azide group and can undergo copper-catalyzed azide-alkyne cycloaddition reaction (CuAAC) with molecules containing Alkyne groups. Strain-promoted alkyne-azide cycloaddition (SPAAC) can also occur with molecules containing DBCO or BCN groups. | |
| IC₅₀ & Target | PEGs | Alkyl/ether |
| In Vitro | PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only. | |
