Grazoprevir hydrate

Cat. No.: HY-15298B

CAS No.: 1350462-55-3

Molecular Formula: $C_{38}H_{52}N_6O_{10}S$

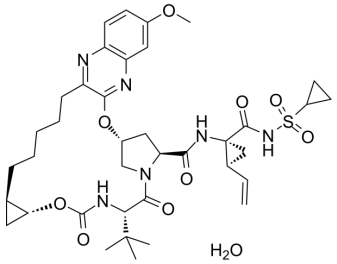
Molecular Weight: 784.92

Target: HCV; HCV Protease; SARS-CoV

Pathway: Anti-infection; Metabolic Enzyme/Protease

Storage:

Powder	-20°C	3 years
	4°C	2 years
In solvent	-80°C	2 years
	-20°C	1 year



SOLVENT & SOLUBILITY

In Vitro

DMSO : 50 mg/mL (63.70 mM; Need ultrasonic)

Preparing Stock Solutions	Solvent / Mass / Concentration	1 mg	5 mg	10 mg
	1 mM	1.2740 mL	6.3701 mL	12.7402 mL
	5 mM	0.2548 mL	1.2740 mL	2.5480 mL
	10 mM	0.1274 mL	0.6370 mL	1.2740 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
   Solubility: ≥ 2.5 mg/mL (3.19 mM); Clear solution
2. Add each solvent one by one: 10% DMSO >> 90% corn oil
   Solubility: ≥ 2.5 mg/mL (3.19 mM); Clear solution

BIOLOGICAL ACTIVITY

Description

Grazoprevir hydrate (MK-5172 hydrate) is a selective inhibitor of Hepatitis C virus NS3/4a protease with broad activity across genotypes and resistant variants, with K_is of 0.01 nM (gt1b), 0.01 nM (gt1a), 0.08 nM (gt2a), 0.15 nM (gt2b), 0.90 nM (gt3a), respectively[1][2]. Grazoprevir hydrate inhibits SARS-CoV-2 $3CL^{pro}$ activity[3].

IC_{50} & Target

Ki: 0.01±<0.01 nM (gt1b), 0.01±0.01 nM (gt1a), 0.08±0.02 nM (gt2a), 0.15±0.06 nM (gt2b), 0.90±0.2 nM (gt3a)[1]

In Vitro

In biochemical assays, Grazoprevir (MK-5172) is effective against a panel of major genotypes and variants engineered with common resistant mutations, with K_i of 0.01±<0.01 nM (gt1b), 0.01±0.01 nM (gt1a), 0.08±0.02 nM (gt2a), 0.15±0.06 nM (gt2b), 0.90±0.2 nM (gt3a), 0.07±0.01 nM ($gt1b^{R155K}$), 0.14±0.03 nM ($gt1b^{D168V}$), 0.30±0.04 nM ($gt1b^{D168Y}$), 5.3±0.9 nM ($gt1b^{A156T}$), and 12±2 nM ($gt1b^{A156V}$), respectively. In the replicon assay, Grazoprevir demonstrates subnanomolar to low-nanomolar EC_{50}s

	against genotypes 1a, 1b, and 2a, with EC_{50}s of 0.5±0.1 nM, 2±1 nM, and 2±1 nM for gt1b^{con1}, gt1a, and gt2a, respectively. Grazoprevir is potent against a panel of HCV replication mutants NS5A (Y93H) (EC_{50}=0.7±0.3 nM), NS5B nucleosides (S282T) (EC_{50}=0.3±0.1 nM), and NS5B (C316Y) (EC_{50}=0.4±0.2)[1]. Grazoprevir (MK-5172) maintains the excellent potency against the gt 3a enzyme as well as a broad panel of mutant enzymes, has excellent potency in the replicon system [gt1b IC_{50}(50% NHS)=7.4 nM; gt1a IC_{50}(40% NHS)=7 nM], and shows excellent rat liver exposure[2]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
In Vivo	Grazoprevir (MK-5172) demonstrates efficacy in vivo against chronic-HCV-infected chimpanzees[1]. When dosed to dogs, Grazoprevir (MK-5172) shows low clearance of 5 mL/min/kg and a 3 h half-life after iv dosing and has good plasma exposure (AUC=0.4 μM h) after a 1 mg/kg oral dose. Dog liver biopsy studies showed that the liver concentration of Grazoprevir after the 1 mg/kg oral dose is 1.4 μM at the 24 h time point. Similar to its behavior in rats, Grazoprevir demonstrates effective partitioning into liver tissue and maintains high liver concentration, relative to potency, 24 h after oral dosing in dogs[2]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
