BIOLOGICAL ACTIVITY

Description

N2-Phenoxyacetyl-3',5'-O-(tetraisopropylidisiloxane-1,3-diyl)guanosine is a guanosine analog. Some guanosine analogs have immunostimulatory activity. In some animal models, they also induce type I interferons, producing antiviral effects. Studies have shown that the functional activity of guanosine analogs is dependent on the activation of Toll-like receptor 7 (TLR7)^[1].
