BIOLOGICAL ACTIVITY

Description	BRD9539 is a histone methyltransferase G9a inhibitor with an IC ₅₀ of 6.3 μM. BRD9539 also inhibits PRC2 activity and is inactive against SUV39H1, NSD2 and DNMT1 ^[1] .	
IC₅₀ & Target	G9a 6.3 μM (IC ₅₀)	PRC2
In Vitro	BRD9539 decreases ATP levels in a dose-dependent manner in HeLa cells ^[1] . BRD9539 is a more potent biochemical inhibitor than its methyl-ester analogue BRD4770, with 20% remaining G9a activity compared to 45% of BRD4770 at screening concentration. However, BRD9539 has no activity in cell-based assays, presumably due to impaired cell permeability compared to that of BRD4770. In addition, the activities of 16 other	

chromatin-modifying enzymes and 100 kinases involved in cell-cycle regulation and cancer cell biology are tested for activity in the presence of 5 or 10 μM BRD9539; no activity is seen in any of these assays^[1].
MCE has not independently confirmed the accuracy of these methods. They are for reference only.
