### BIOLOGICAL ACTIVITY

<b>Description</b>	Birinapant (TL32711), a bivalent Smac mimetic, is a potent antagonist for XIAP and cIAP1 with K <sub>d</sub> s of 45 nM and less than 1 nM, respectively. Birinapant (TL32711) induces the autoubiquitylation and proteasomal degradation of cIAP1 and cIAP2 in intact cells, which results in formation of a RIPK1: caspase-8 complex, caspase-8 activation, and induction of tumor cell death. Birinapant (TL32711) targets TRAF2-associated cIAPs and abrogates TNF-induced NF-κB activation.
<b>IC<sub>50</sub> &amp; Target</b>	K <sub>d</sub> : 45 nM (XIAP), <1 nM (cIAP1) <sup>[1]</sup>

## In Vitro

Birinapant (TL32711) (30-10000 nM; 24 hours) significantly decreases the viability of SUM190 cells in a dose-dependent manner<sup>[1]</sup>.  
?Birinapant (TL32711) (30-1000 nM; 4 hours) shows a significant decrease in cIAP1 levels and enhanced PARP cleavage, and induces apoptosis<sup>[1]</sup>.  
?Birinapant (TL32711) binds with high affinity to the isolated BIR3 domains of cIAP1, cIAP2, and XIAP and the single BIR domain of ML-IAP and rapidly degrades TRAF2-bound cIAP1 and cIAP2 thereby inhibiting TNF-mediated NF- $\kappa$ B activation<sup>[1]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

### Cell Viability Assay<sup>[1]</sup>

Cell Line:	TRAIL-resistant SUM190 IBC cells
Concentration:	30, 100, 300, 1000, 10000 nM
Incubation Time:	24 hours
Result:	Significantly decreased the viability of SUM190 cells in a dose-dependent manner.

### Western Blot Analysis<sup>[1]</sup>

Cell Line:	SUM190 cells
Concentration:	30, 300, 1000 nM
Incubation Time:	4 hours
Result:	Showed a significant decrease in cIAP1 levels and enhanced PARP cleavage.

## In Vivo

Birinapant (TL32711) (30 mg/kg; i.p.; every third day (\*5)) shows antitumor efficacy and are devoid of overt toxicity in preclinical models<sup>[2]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Female athymic nude mice (low-passage, patient-derived xenotransplant models of ovarian cancer, colorectal cancer, and melanoma) <sup>[2]</sup>
Dosage:	30 mg/kg
Administration:	Intraperitoneal injection; every third day (*5)
Result:	Resulted in inhibition of tumor growth.
