

Cortisone-d7

| | |
|---------------------------|---|
| Cat. No.: | HY-17461S2 |
| CAS No.: | 1261254-36-7 |
| Molecular Formula: | C ₂₁ H ₂₁ D ₇ O ₅ |
| Molecular Weight: | 367.49 |
| Target: | Glucocorticoid Receptor; Endogenous Metabolite |
| Pathway: | Immunology/Inflammation; Metabolic Enzyme/Protease |
| Storage: | Please store the product under the recommended conditions in the Certificate of Analysis. |

BIOLOGICAL ACTIVITY

| | |
|--------------------|--|
| Description | Cortisone-d7 is the deuterium labeled Cortisone. Cortisone (17-Hydroxy-11-dehydrocorticosterone), an oxidized metabolite of Cortisol (a Glucocorticoid). Cortisone acts as an immunosuppressant and anti-inflammatory agent. Cortisone can partially intervene in binding of Glucocorticoid to Glucocorticoid-receptor at high concentrations ^{[1][3][4]} . |
| In Vitro | Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only. |
