BIOLOGICAL ACTIVITY

Description	Dolastatin 10 (DLS 10) is a potent antimetabolic peptide that inhibits tubulin polymerization.
IC₅₀ & Target	Auristatin
In Vitro	<p>Dolastatin 10 is a unique pentapeptide that isolated from the sea hare <i>Dolabella auricularia</i>. These in vitro data are quite comparable to those of Dolastatin 10 and Auristatin PE, each of which has GI₅₀ values of 10⁻⁵-10⁻⁶ μg/mL (10⁻²-10⁻³ nM) against a similar minipanel of human cell lines^[2]. The antibody-drug conjugate (ADC) comprises the anti-CD30 monoclonal antibody cAC10 conjugated to the cytotoxic agent monomethyl auristatin E (MMAE), a synthetic analog of the tubulin polymerization inhibitor Dolastatin 10^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
