

## Ebrotidine

<b>Cat. No.:</b>	HY-15538												
<b>CAS No.:</b>	100981-43-9												
<b>Molecular Formula:</b>	C <sub>14</sub> H <sub>17</sub> BrN <sub>6</sub> O <sub>2</sub> S <sub>3</sub>												
<b>Molecular Weight:</b>	477.42												
<b>Target:</b>	Histamine Receptor												
<b>Pathway:</b>	GPCR/G Protein; Immunology/Inflammation; Neuronal Signaling												
<b>Storage:</b>	<table border="0"> <tr> <td>Powder</td> <td>-20°C</td> <td>3 years</td> </tr> <tr> <td></td> <td>4°C</td> <td>2 years</td> </tr> <tr> <td>In solvent</td> <td>-80°C</td> <td>2 years</td> </tr> <tr> <td></td> <td>-20°C</td> <td>1 year</td> </tr> </table>	Powder	-20°C	3 years		4°C	2 years	In solvent	-80°C	2 years		-20°C	1 year
Powder	-20°C	3 years											
	4°C	2 years											
In solvent	-80°C	2 years											
	-20°C	1 year											

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : 100 mg/mL (209.46 mM; Need ultrasonic)

Concentration	Solvent	Mass		
		1 mg	5 mg	10 mg
Preparing Stock Solutions	1 mM	2.0946 mL	10.4730 mL	20.9459 mL
	5 mM	0.4189 mL	2.0946 mL	4.1892 mL
	10 mM	0.2095 mL	1.0473 mL	2.0946 mL

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
Solubility: ≥ 2.5 mg/mL (5.24 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)  
Solubility: ≥ 2.5 mg/mL (5.24 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil  
Solubility: ≥ 2.5 mg/mL (5.24 mM); Clear solution

### BIOLOGICAL ACTIVITY

#### Description

Ebrotidine (FI 3542) is a competitive H<sub>2</sub>-receptor antagonist (K<sub>i</sub> = 127.5 nM) with a potent antisecretory activity and evidenced gastroprotection. IC<sub>50</sub> Value: 127.5 nM (K<sub>i</sub>) [1]; 0.21 mg/kg (ED<sub>50</sub>, histamine-stimulated acid secretion) [2] Target: H<sub>2</sub> receptor in vitro: Ebrotidine displaced 3H-thiotidine specific binding to histamine H<sub>2</sub>-receptors (K<sub>i</sub>: 127.5 nmol/l), showing a higher affinity (p < 0.05) than ranitidine (K<sub>i</sub>: 190.0 nmol/l) and cimetidine (K<sub>i</sub>: 246.1 nmol/l) [1]. in vivo: Following intravenous administration to rats, ebrotidine inhibited histamine- and pentagastrin-stimulated acid secretion in a dose-dependent manner, ED<sub>50</sub> being 0.21 and 0.44 mg/kg, respectively [2]. The mean number of gastric erosions seen at endoscopy after treatment with ebrotidine plus ASA (2.0 +/- 0.3) was significantly lower than that after placebo plus ASA (3.7

---

+/- 0.2). This reduction in lesion core by ebrotidine was accompanied by a significant increase in gastric blood flow (by 15% in corpus and 26% in antrum), by a rise in transmucosal potential difference (by 12%), and by a decrease of mucosal microbleeding [3]. Results of macroscopic assessment revealed that ebrotidine at doses of 50mg and higher/kg body weight effectively prevented mucosal injury, and that the maximal protective effect was achieved by 1h. Physicochemical analysis established that ebrotidine evoked 30% increase in mucus gel dimension, and showed 20% increase in phospholipids, and the content of sulfo- (18%) and sialomucins (21%) [4].
