Elafibranor

Cat. No.: HY-16737

CAS No.: 923978-27-2

Molecular Formula: $C_{22}H_{24}O_4S$

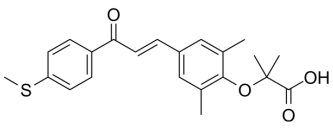
Molecular Weight: 384.49

Target: PPAR

Pathway: Cell Cycle/DNA Damage; Vitamin D Related/Nuclear Receptor

Storage:

Powder	-20°C	3 years
	4°C	2 years
In solvent	-80°C	1 year
	-20°C	6 months



SOLVENT & SOLUBILITY

In Vitro

DMSO : ≥ 33 mg/mL (85.83 mM)

* "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Mass / Solvent / Concentration	1 mg	5 mg	10 mg
	1 mM	2.6008 mL	13.0042 mL	26.0085 mL
	5 mM	0.5202 mL	2.6008 mL	5.2017 mL
	10 mM	0.2601 mL	1.3004 mL	2.6008 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

1. Add each solvent one by one: 5% DMSO >> 40% PEG300 >> 5% Tween-80 >> 50% saline
   Solubility: 2.87 mg/mL (7.46 mM); Suspended solution; Need ultrasonic
2. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
   Solubility: ≥ 2.17 mg/mL (5.64 mM); Clear solution
3. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
   Solubility: ≥ 2.17 mg/mL (5.64 mM); Clear solution
4. Add each solvent one by one: 10% DMSO >> 90% corn oil
   Solubility: ≥ 2.17 mg/mL (5.64 mM); Clear solution
5. Add each solvent one by one: 10% DMSO >> 90% corn oil
   Solubility: ≥ 2.17 mg/mL (5.64 mM); Clear solution

BIOLOGICAL ACTIVITY

Description Elafibranor (GFT505) is a PPARα/δ agonist with EC_{50}s of 45 and 175 nM, respectively.

IC_{50} & Target	PPAR-α 45 nM (EC50)	PPAR-δ 175 nM (EC50)
In Vitro	Elafibranor (GFT505) is being developed as a dual PPAR-α/PPAR-δ agonist for the inhibition of T2DM and non-alcoholic fatty liver disease. Elafibranor has an active metabolite, GFT1007, and both have potent agonist activity for PPAR-α and to a lesser extent for PPAR-δ[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.	
In Vivo	Elafibranor is well tolerated and does not cause weight gain or cardiac events, but does produce a mild, reversible increase in serum creatinine. Elafibranor improves glucose homeostasis, and lipid metabolism and reduces inflammation[2]. Elafibranor (GFT505) treatment improves glucose control and plasma lipids in diabetic db/db mice. A significant dose-dependent reduction of hepatic expression of the key gluconeogenic enzymes glucose 6-phosphatase (G6Pase), PEPCK, and fructose 1,6-bisphosphatase 1 (FBP1) is observed with Elafibranor. Elafibranor does not induce cardiac adverse effects of PPARγ-activating agonists in monkeys[3]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
