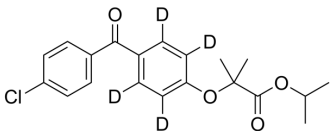
Fenofibrate-d_4

Cat. No.:	HY-17356S1
CAS No.:	1092484-57-5
Molecular Formula:	$C_{20}H_{17}D_4ClO_4$
Molecular Weight:	364.86
Target:	PPAR; Autophagy; Cytochrome P450
Pathway:	Cell Cycle/DNA Damage; Vitamin D Related/Nuclear Receptor; Autophagy; Metabolic Enzyme/Protease
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.



BIOLOGICAL ACTIVITY

Description	Fenofibrate-d_4 is the deuterium labeled Fenofibrate[1]. Fenofibrate is a selective PPARα agonist with an EC50 of 30 μM. Fenofibrate also inhibits human cytochrome P450 isoforms, with IC50s of 0.2, 0.7, 9.7, 4.8 and 142.1 μM for CYP2C19, CYP2B6, CYP2C9, CYP2C8, and CYP3A4, respectively[2][3].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
