

NU6102

Cat. No.:	HY-15569		
CAS No.:	444722-95-6		
Molecular Formula:	C ₁₈ H ₂₂ N ₆ O ₃ S		
Molecular Weight:	402.47		
Target:	CDK		
Pathway:	Cell Cycle/DNA Damage		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

SOLVENT & SOLUBILITY

In Vitro	DMSO : 100 mg/mL (248.47 mM; Need ultrasonic)			
		Solvent Concentration	Mass	
			1 mg	5 mg
	Preparing Stock Solutions		10 mg	
	1 mM	2.4847 mL	12.4233 mL	24.8466 mL
	5 mM	0.4969 mL	2.4847 mL	4.9693 mL
	10 mM	0.2485 mL	1.2423 mL	2.4847 mL
Please refer to the solubility information to select the appropriate solvent.				
In Vivo	1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (6.21 mM); Clear solution			
	2. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (6.21 mM); Clear solution			
	3. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.5 mg/mL (6.21 mM); Clear solution			

BIOLOGICAL ACTIVITY

Description	NU6102 is a potent CDK1 and CDK2 inhibitor with IC ₅₀ s of 9.5 nM and 5.4 nM for CDK1/cyclinB and CDK2/cyclinA3, respectively. NU6102 shows selectivity for CDK1/CDK2 over CDK4 (IC ₅₀ of 1.6 μM), DYRK1A (IC ₅₀ of 0.9 μM), PDK1 (IC ₅₀ of 0.8 μM) and ROCKII (IC ₅₀ of 0.6 μM) ^{[1][2]} .			
IC ₅₀ & Target	Cdk1/cyclin B	CDK2/cyclin A3	CDK4	DYRK1A
	9.5 nM (IC ₅₀)	5.4 nM (IC ₅₀)	1.6 μM (IC ₅₀)	0.9 μM (IC ₅₀)
	PDK1			

	0.8 μM (IC_{50})								
In Vitro	<p>NU6102 (0-30 μM; 1-24 hours; SKUT 1B cells) treatment induces a G2 arrest, inhibition of Rb phosphorylation and cytotoxicity (LC_{50} 2.6 μM for a 24 h exposure) in SKUT-1B cells^[3].</p> <p>NU6102 inhibits cell growth and causes cell cycle phase arrest in human breast cancer cell lines, G2/M arrest in asynchronously growing cell lines and G1/S arrest in cells released from serum starvation, and in <i>Xenopus</i> nuclei in a time-dependent manner^[3].</p> <p>NU6102 selectively inhibits the growth of CDK2 WT (wild type) versus KO MEFs (knockout mouse embryo fibroblasts) (GI_{50} of 14 μM versus >30 μM)^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Cycle Analysis^[3]</p>

	Cell Line:	SKUT 1B cells							
	Concentration:	0 μM , 3 μM , 10 μM , and 30 μM							
	Incubation Time:	1 hours, 3 hours, 6 hours, and 24 hours							
Result:	Induced a G2 arrest, inhibition of Rb phosphorylation and cytotoxicity (LC_{50} 2.6 μM for a 24 h exposure).								
In Vivo	<p>The pharmacokinetics of NU6102 is determined following i.v. and i.p. administration in Balb/C mice. The limited solubility of NU6102 meant the maximum administrable dose is 1 mg/kg i.v. and 10 mg/kg i.p. NU6102 is liberated following either i.p. or i.v. administration of NU6301, and following i.v. administration peak plasma levels of 12 μM NU6102 is observed 5 min post administration, whereas following administration of the maximum administrable dose of NU6102 i.v. the peak concentration achieved is 0.92 μM. The plasma half-life of NU6102 liberated following administration of NU6301 is 42 min following i.p. and 10 min following i.v. administration^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
