

Clomipramine-d6 hydrochloride

Cat. No.:	HY-B0457S1
CAS No.:	1189882-28-7
Molecular Formula:	C ₁₉ H ₁₈ D ₆ Cl ₂ N ₂
Molecular Weight:	357.35
Target:	Serotonin Transporter
Pathway:	Neuronal Signaling
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Clomipramine-d6 (Chlorimipramine-d6) hydrochloride is the deuterium labeled Clomipramine hydrochloride. Clomipramine (Chlorimipramine) hydrochloride is a potent 5-HT reuptake blocker with the IC ₅₀ value of 1.5 nM. Clomipramine hydrochloride is a tricyclic antidepressant that can be used for the research of depression and obsessive compulsive disorder (OCD) ^[1] .
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
