## **Product** Data Sheet

# Cyclic AMP

Molecular Weight:

**Cat. No.:** HY-B1511 CAS No.: 60-92-4

Molecular Formula:  $C_{10}H_{12}N_5O_6P$ 

Target: Endogenous Metabolite

Pathway: Metabolic Enzyme/Protease

329.21

Storage: Powder -20°C 3 years In solvent -80°C 6 months

-20°C 1 month

#### **SOLVENT & SOLUBILITY**

In Vitro 0.1 M NaOH: 30 mg/mL (91.13 mM; ultrasonic and adjust pH to 6 with NaOH)

H<sub>2</sub>O: 2.4 mg/mL (7.29 mM; Need ultrasonic)

DMSO: < 1 mg/mL (insoluble or slightly soluble)

Preparing Stock Solutions	Solvent Mass Concentration	1 mg	5 mg	10 mg
	1 mM	3.0376 mL	15.1879 mL	30.3757 mL
	5 mM	0.6075 mL	3.0376 mL	6.0751 mL
	10 mM	0.3038 mL	1.5188 mL	3.0376 mL

Please refer to the solubility information to select the appropriate solvent.

### **BIOLOGICAL ACTIVITY**

Description	Cyclic AMP (Cyclic adenosine monophosphate), adenosine triphosphate derivative, is an intracellular signaling molecule responsible for directing cellular responses to extracellular signals. Cyclic AMP is an important second messenger in many biological processes <sup>[1][2][3]</sup> .	
IC <sub>50</sub> & Target	Microbial Metabolite Human Endogenous Metabolite	
In Vitro	Cyclic AMP (Cyclic adenosine monophosphate) modulates mediator generation. Cyclic AMP suppresses the expression of pro-inflammatory cytokines, including TNF- $\alpha$ and IL-12, and enhances the production of the anti-inflammatory cytokine IL-	

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
