

## Grepafloxacin

Cat. No.:	HY-A0147
CAS No.:	119914-60-2
Molecular Formula:	C <sub>19</sub> H <sub>22</sub> FN <sub>3</sub> O <sub>3</sub>
Molecular Weight:	359.39
Target:	Antibiotic; Bacterial
Pathway:	Anti-infection
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Grepafloxacin (OPC-17116) is an oral actively fluoroquinolone antibiotic with potent activity against community-acquired respiratory pathogens including <i>Streptococcus pneumoniae</i> . Grepafloxacin has high tissue penetration and a promising pharmacodynamic profile <sup>[1][2][3]</sup> .														
<b>IC<sub>50</sub> &amp; Target</b>	Quinolone														
<b>In Vitro</b>	<p>Grepafloxacin (OPC-17116; 0-1 mg/L; 14-21 d) has antibiotic activity with a MIC value of ≤ 0.006 mg/L for <i>E. coli</i> strain<sup>[1]</sup>. Grepafloxacin (0-1 mg/L; 3 h) has antimicrobial activity against mycobacteria in macrophages with a MIC value of 0.5 mg/L for <i>M. avium</i><sup>[1]</sup>.</p> <p>Grepafloxacin exhibits potent in vitro antibacterial activity against Gram-positive bacteria such as <i>Streptococcus pneumoniae</i> and high in vivo efficacy on the experimental systemic infections caused by the Gram-positive and -negative bacteria tested<sup>[4]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>														
<b>In Vivo</b>	<p>Grepafloxacin (OPC-17116; 200 mg/kg; p.o.; Balb/c mice) displays good safety profile in terms of phototoxicity<sup>[2]</sup>. Grepafloxacin (25-200 mg/kg; p.o.; 5 days/week for 4 weeks; female C57BL6/J-Lyst bg-J/ mice/beige mice) has modest activities in both intranasal (IN) infection and intravenous (IV) <i>Mycobacterium avium</i> infection models<sup>[3]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>Female Balb/c mice (5-6 weeks)<sup>[2]</sup></td> </tr> <tr> <td>Dosage:</td> <td>200 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Oral administration; once</td> </tr> <tr> <td>Result:</td> <td>Had mild and short-lived erythema and no changed auricular thickness.</td> </tr> </table> <table border="1"> <tr> <td>Animal Model:</td> <td>Female C57BL6/J-Lyst bg-J/ mice/beige mice with mycobacterium avium infection<sup>[3]</sup></td> </tr> <tr> <td>Dosage:</td> <td>25, 50, 100, and 200 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Oral administration; 5 days/week for 4 weeks</td> </tr> </table>	Animal Model:	Female Balb/c mice (5-6 weeks) <sup>[2]</sup>	Dosage:	200 mg/kg	Administration:	Oral administration; once	Result:	Had mild and short-lived erythema and no changed auricular thickness.	Animal Model:	Female C57BL6/J-Lyst bg-J/ mice/beige mice with mycobacterium avium infection <sup>[3]</sup>	Dosage:	25, 50, 100, and 200 mg/kg	Administration:	Oral administration; 5 days/week for 4 weeks
Animal Model:	Female Balb/c mice (5-6 weeks) <sup>[2]</sup>														
Dosage:	200 mg/kg														
Administration:	Oral administration; once														
Result:	Had mild and short-lived erythema and no changed auricular thickness.														
Animal Model:	Female C57BL6/J-Lyst bg-J/ mice/beige mice with mycobacterium avium infection <sup>[3]</sup>														
Dosage:	25, 50, 100, and 200 mg/kg														
Administration:	Oral administration; 5 days/week for 4 weeks														

---

Result:

Had bactericidal activity and limited the growth of the bacteria.
