BIOLOGICAL ACTIVITY

Description	Toltrazuril (BAY-i 9142) is an antiprotozoal agent that acts upon Coccidia parasites.
IC ₅₀ & Target	Coccidia
In Vitro	<p>Toltrazuril (BAY-i 9142) is an antiprotozoal agent that acts upon Coccidia parasites. Toltrazuril induces changes in the fine structure of coccidian development stages that are mainly due to a swelling of the endoplasmic reticulum and of the Golgi apparatus and to abnormalities in the peri-nuclear space, disturbance in nuclear division. Treated with toltrazuril showed a considerably lower mean opg to that of group C (5.78 opg versus 144.62 opg) (p < 0.05) and a FOCR of 97.7 %. The higher efficacy (99.23 %) was observed at 15 days post treatment; however, the average efficacy of the drug remained extremely high (> 90 %) for all the study.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
