BIOLOGICAL ACTIVITY	
Description	Isodihydroauroglaucin, a fungal metabolite, shows antibacterial activity <sup>[1]</sup> .
IC <sub>50</sub> & Target	Microbial Metabolite
In Vitro	Isodihydroauroglaucin shows antibacterial activity on the majority of the Gram-positive bacteria tested (except S. pneumonia ATCC 49619), with MIC values ranging from 4 μg/mL to 64 μg/mL; the lowest value was observed against the macrolide-resistant S. pneumoniae Monza-82. Isodihydroauroglaucin shows similar MIC values when tested against Bacillus cereus and Salmonella typhimurium <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
